

JANUARY

## Manifest Destiny of the U.S.

Nowhere is this anticipated history more enjoyed, nowhere is it easier to connect, than in the United States, where the young republic is manifestly a natural and a new phenomenon.

ident dogma, the ambitious formula of President Monroe, according to which the manifest destiny of the Americas of the North is to rule over the whole of the New World. So, at this point, a great newspaper of New York, recently again, took up the Monroe theme of the division of the world among the most powerful nations of the world. It felt no difficulty in

ing out of the Old World, for France, England, and Russia, three insignificant shares, capable of simply satisfying the ambition of each of those nations; but by way of compensation it claimed for the Yankees the exclusive domination over the whole of the American continent.

States show themselves resolved to reject any foreign interference, or influence at the most important part of the Western Hemisphere—The Central American isthmus. Although affecting its willingness to guaranty the neutrality of inter-oceanic communications which are to be established by the opening of the isthmus, the government of that republic does not wish this work of civilization to be effected by other

than those of Americans. There it speaks in menacing language to these feeble States of Central America, with a view to resist their aggressive adversary, endeavor to unite, invoke the assistance of the great European Nations.

Can they be prevented from seizing this opportunity, be it a land or canal way, and becoming thus absolute master of the point of junction of the two oceans? It seems to be their intention; and should it be realized, what will be the consequence?

in the west. The yet-unpaved  
which will one day spring up be-  
tween the two American contin-  
ents will be the Alexandria of the  
future. It will at the same time be an  
emporium for the eastern and the  
western world—for Europe and for  
the Central American isthmus.  
It will be the isthmus of Suez of the  
future Alexandria; and an isthmus  
opened up to universal trade.

And that dream which conceals America the future capital of the world assigns to her the political command, what does it leave to Europe? "A venerable past," it promises her? Proud of it, she will visit and contemplate such places where civilization began

\* \* \*

In a political pamphlet, entitled "England and Russia," in which the pressing questions of the moment are dealt with a bold sharpness of logic and insight, Mr. De Cesenah has recourse to an argument of this kind to predicate the decline of British ascendancy. He rescues the day "when he who steers the cars at Calais, leaving them only to grope as heavily laden animals, will

verse on board a steamer, "The Orient Express," will reach the Oriental Capital, passing through Paris, Constantinople, Smyrna, and Peking, and find himself within a fortnight at once transported to the other hemisphere, without having hardly left the main land." And the publicist adds: "This will be the death of England." In another place, without circumlocution, says: "Before the last year of this century will

re elapsed, the ruler of the world  
had descended to the level of  
England.' In a word, according to this  
writer, it is Russia which destiny  
wishes to push on everywhere, in order  
to make her great upon the ruins of  
British power.

McCurt, that on the 20th inst. selling to A. Coleman, Executor of the late Benjamin W. with Wm. K. Underhill, Auctioneer, sold fifty-two negroes, of indiscriminate ages, sizes and conditions, for the large sum of \$50,000, averaging only thirty dollars, being an average of over \$960. Eighteen of these negroes were under ten years of age, and were forty years old and upwards, and they were sold in families of eight

they were sold in families without separation, frequently as many as five or six selling together. Negro men brought from \$1400 to \$1675; boys from twelve to fourteen years old from \$50 to \$1400; girls from nine to fourteen years of age, from \$1050 to \$1400.

*Confederation.*

One of the most extraordinary sales of slaves—not so much on account of their number as the prices obtained there, although even the number very large—was made at public auction at the village of Antaugaville, on four days of last week. One hundred and seventy slaves, belonging to the estate of Richard Morton, were on twelve months time with interest added, for the enormous sum of one

about 1941, and the average of 8941 and a fraction. In the large number composition, there were old and young, half and whole, and one was deaf and dumb. A 14-year-old black and a field hand brought \$1935. A young female was sold for \$2100. Evidently the same types of Americans they were.

"wonderful things, too, and money!" as the old woman said when she saw a monkey.

We are authorized to announce that T. Ryan, as a candidate for Sheriff of Calhoun County—election 1st Monday of August next.

We are authorized to announce Fielding Love, as a candidate for Sheriff of Calhoun County—election 1st Monday of August next.

We are authorized to announce Wm. P. Downing, as a candidate for Sheriff of Calhoun County—election 1st Monday in August next.

We are authorized to announce JAMES MEHARR, Esq., as a candidate for Tax Collector of Calhoun Co.—election 1st Monday in August next.

We are authorized to announce F. M. TREADAWAY, as a candidate for Tax Assessor of Calhoun County.

### The New Year.

We extend the usual congratulations of the season to our patrons, friends and acquaintances—heartily wishing them health, happiness and prosperity; but we are too busy now to write a homily on the rapid flight of time—the hopes and fears and disappointments of life.

We enter upon the new year and upon our 23rd volume, with renewed determination to bend every energy to increase the interest and usefulness of our paper, and make it worthy of its constantly increasing patronage. Our readers will perceive that we have an addition of several columns of news & miscellaneous articles in to-day's paper, which it is our purpose still to increase.

### Telegraphic News.

A great variety of very interesting news will be found under the telegraphic head in to-day's paper. One of the most pleasing items, is that of the advance in cotton—and the most sad and melancholy are those giving an account of the horrible rail road disasters in Georgia. There must have been criminal negligence and recklessness somewhere. It seems to us, that after the great floods of rain which have recently fallen, the most ignorant African wagner, would have anticipated and guarded against danger.

The news from California & Mexico, and of the filibustering movements is very interesting; and among the things new under the sun is the proposition of Hon. J. Davis of Miss., to take Cuba from Spain as an absent and fraudulent debtor.

### Baltimore Commercial College.

The advertisement of this, the largest and most elegantly furnished Commercial College in the United States, containing a list of the Faculty, Trustees, &c., may be found in another column of to-day's paper. The admirable system of Book Keeping and Penmanship taught, and great amount of valuable information imparted at this College, render it well worthy the attention of young men who desire to engage in commercial pursuits; and in fact, many of those already engaged, could hardly spend 8 or 10 weeks more profitably and advantageously than in obtaining the information, so essential to success, there imparted. The Commercial College of Baltimore is among the oldest, and doubtless one of the very best in the United States.

### Large Crop Chinese Sugar Cane.

We have been informed by Maj. J. E. Peace of this County, that he made over four fourth acre, in Chinese Sugar Cane, fifty-nine gallons and three quarts of syrup, 14 bushels of seed, and 200 bundles of fodder. This is certainly a very large yield, and is an additional proof of the immense value of this article. This yield on this 4th of an acre is larger than the average of an acre in wheat, besides the fodder and molasses.

### Labor Tuesday.

Mr. Allen, living below Oxford, sent us, last week, a tur-

The land, advertised for sale in to-day's paper, by R. W. Draper, Adm'r. of John Pasternow, deceased is well worthy the attention of purchasers. The land is very valuable, well improved, and advantageously situated.

The attention of the citizens of White Plains and vicinity, is invited to the advertisement of Mr. R. E. Noold, Artist, who has recently removed to that place. Mr. Noold is an artist of ability and experience, and will doubt give entire satisfaction to his patrons—we heartily wish him success.

Dr. Cloud's Southern Rural Magazine.—The January number of this beautiful and valuable Agricultural Magazine has been received. It is considerably enlarged and improved, and commends itself a new to the liberal patronage of Southern Planters.—It is published monthly; at \$1 per annum, in advance, or 11 copies for \$10. Address, Dr. N. B. Cloud Montgomery, Ala.

Arch's Ladies National Magazine is still published at Philadelphia at \$2 per annum in advance; and is nearly, if not quite unrivalled. The January number is exceedingly interesting, and rich with rare and costly engravings.

"Crazy Jane" shall have a place in our next.

Melancholy Suicide.—F. M. Young, living near Gadsden, committed suicide, a few days ago, by cutting his throat. He had been subject to paroxysms of insanity of hereditary character, which appeared to increase in frequency and intensity after the death of his wife, which occurred several years ago. He was always harmless, and in his lucid intervals, conscientious and correct in deportment. He leaves three small children.

### King Cotton.

Vast is the growth of Cotton in the United States, says the Philadelphia Inquirer, and wonderful its influence upon the comforts of mankind and the industry of the nations. If we ask what article, more than all others, has employed its millions of human beings in comparatively new pursuits, the reply will be Cotton. What single product has produced the greatest commerce known to the world? Cotton. What has proved to be a main incentive to the invention of new machinery and steam movements? Cotton. What has brought regions of territory into cultivation in our country? Cotton. What has enriched the nation, and added to the conveniences and luxuries of the people by return cargoes in exchange for our exports? Cotton. What has built up an unprecedented shipping interest? Cotton. What article may be said to secure continued peace? Cotton. But these interminable queries may be multiplied almost indefinitely, and the answers would be comprised in that simple word, cotton—still cotton! The combinations and ramifications created by the great American staple, and measuring permeating as it were, all society, both in the Old World and the New, are all but endless.

A MYSTERIOUS CAPITALIST.—The San Francisco Bulletin has a letter from a correspondent in Australia, dated Melbourne, June 1st, in which the writer says: One of the most extraordinary characters of the day here is a Mr. Gabrielli, a London Jew, who advances any amount of money required of him—"half down and half in six months"—at eight per cent per annum. The other day he advanced the corporation of this city a million of pounds, and in neighboring towns, another Jew, and after having announced that he is ready to do "eight millions for the Government for the railroads, he offers to invest a million here and a million there, in "testing the mines of the country, upon terms which, when completed with, he is never lacking in producing the major part of the needed, and the remainder at the end of the specified time. The beauty of it is, nobody knows where he puts his money from.—The members of the Government have frequently "pumped" him on the subject, but the only answer he designs to give is the production of the cash. Some say he is an agent of the Rothschilds, but this is merely a surmise, founded on the fact that he is a Jew. The London Jew is really a "remarkable man." He has his prejudices, however, for upon mentioning to him California as presenting a fine field for speculation in mines and railroads, he expressed his doubts as to "security."

WASHINGTON, Dec. 26.—A correspondent of the Augusta Chronicle says: You will be surprised, probably, to learn that arrangements are now being made to commence mining for diamonds in Georgia; yet it is so. Two localities have been found where the true matrix, with all its accompanying minerals, is found in abundance, and from the upper section in Hall and other counties, several have been found of the finest quality. The classic sandstone (freestone), the true matrix of the diamond, extends quite across the State; but diamonds have been found only in those places where gold washing are carried on, being found in the sands of the rills, with the gold, elsewhere they have never sought after.

The other locality has but recently been discovered, and is of limited extent—merely a protrusion of the sandstone and magnesian and specular oxide of iron through the surrounding pyritic (barren) strata, together with immense quantities of stellar tale of unparalleled beauty, associated with magnificent crystals of rutile, from a few lines to inches in diameter. The ironstone is thickly imbedded with splendid crystals of hematite of three different forms. The hematite is a very rare mineral, found in but few places in the world, and is one of the accompanying minerals of the Brazilian diamond mines.

Gold exists in the pyritic states on the south side of the mountain, which is a corresponding formation with the celebrated Dora Mine in South Carolina. They also exhibit every external evidence of the existence of copper, lead and silver. That diamonds abound here there can be no doubt; yet they have not been discovered, and are not probable to mine for them only. In Hall county, they are found in the gold deposit washings, and cost nothing to find them comparatively.

From the Montgomery Advertiser & Gazette.

### ARRIVAL OF THE

### ASIA.

### Cotton Declined.

New York, Dec. 27. The steamship Asia from Liverpool arrived at this port this afternoon. Sales of cotton for the week 42,000 bales. Speculators took 2,000 bales, and exporters 2,500. Middling qualities declined most. Uplands declined 1; Mobile and Orleans 1-16.

### Another Filibuster Expedition.

WASHINGTON, Dec. 23.—The government received dispatches to day, from New Orleans, announcing that filibusters were fitting out another expedition, and its probable destination was Nicaragua. An answer has been returned, with instructions to employ energetic measures to stop the expedition.

### The Susan's Passengers Safely Land.

WASHINGTON, Dec. 23.—The Star of this afternoon says a dispatch has been received to the effect that the filibusters in the schooner Susan have been safely landed on the coast of Nicaragua.

### Congressional.

WASHINGTON, Dec. 24.—In the House, yesterday, Mr. Branch, of North Carolina, introduced a bill appropriating one million of dollars for the purpose of enabling this government to settle its difficulties with Spain, and negotiate for the purchase of Cuba.

### THE CASE OF THE WANDERER.

### Encouragement for Filibusters!

### GREAT SNOW STORM NORTH!

### Important Rumor about Cuba.

### HALIFAX, January 1, 1859.

The steamer Fulton has arrived at this port, bringing three days later news from Europe.

Sales for three days before sailing 22,000 bales, at an advance of 1-16.

Sales the day previous to sailing, 8,000 bales, the market closing firm.

Money easier.

Consols unchanged.

MOBILE, Jan. 1, '59.

Mary and her men have just arrived. The Schooner Susan was wrecked on Glover's Island, and the emigrants brought back by Her Majesty's steamer Basilisk.

### The Wanderer Affair.

SAVANNAH, Dec. 20. The examination of witnesses in the Wanderer affair was resumed to-day by United States Commissioner Henry.

Capt. Luke Christy, of the steam tug Lomar, was recalled, and testified that about the 24th of December, he went from Brunswick to Jersey Island, and there saw a large number of negroes, and reported to him to be about three hundred. He saw them landed by unknown white men. A number of the negroes were put on his boat, and he conveyed them up the Savannah river, about fourteen miles above the city, and landed them.

One other witness was called and examined, but his testimony was unimportant.

The case was continued until to-morrow, in consequence of the illness of one of the promoters.

### Honduras Encouraging Filibusters.

NEW YORK, Dec. 20. The Herald's Panama correspondent says, on what he regards as good authority, that the President of Honduras favors the revolutionary movements now about being made at Leon, in Nicaragua, in favor of the Democrats, and will aid in the transit of the filibusters from Truxillo, across Honduras, to assist in the revolution, provided Gen. Walker is not one of the party.

### Extensive Snow Storm.

NEW YORK, Dec. 31. A severe snow storm is prevailing here, and prevailing at all points North and East here from. There have been no arrivals of vessels to-day, but no disasters at sea, or on the coast, have been reported.

### Revolutionary Emigration to Cuba.

NEW ORLEANS, Dec. 30. It is reported on good authority that emigration to Cuba has been going forward quietly and legally for several

### TELEGRAPHIC.

### TERRIBLE RAILROAD ACCIDENT!!

Forty-Three Persons Killed On the Columbus and Macon Trains.

[Through the politeness of the gentlemanly agent of Adams' Express Company, N. Maroney, Esq., we have been favored with the following dispatch:] Columbus, Ga., Dec. 31.—The morning train from Columbus to Macon ran into Randall's Creek, in consequence of the washing away of the road, by the late rains, and about FORTY PERSONS WERE KILLED AND DROWNED!!

Of all on the train but TWELVE were saved.

The morning train from Macon to Columbus ran into a gulch and FORTY-THREE PERSONS WERE KILLED!! Cause same as above.

[We give the dispatch as received. We do not know the localities spoken of where the above heart-rending accidents occurred but will give further particulars hereafter.—Eds.]

### SECOND DISPATCH.

Columbus, Dec. 31.—The train from Columbus to Macon, ran into a creek sixteen miles from Columbus, before day this morning. From all that can be learned about forty persons were killed and drowned.

But thirteen are reported saved.

The following are known to have been on the train:

Thomas S. O'Brien, Charleston; Miss Henry West, Miss Georgia Van Ness, and Miss Celestia Sharpe, Columbus; Mr. W. P. Dupree, Houston county, Ga.

Further particulars this evening.

### THIRD DISPATCH.

Columbus, Dec. 31, 8 1/4 P. M.—There were twenty-nine persons on the train. Twelve are saved; among them Dr. Walker, Dr. Phillips, S. M. Blake, of New York, and Conductor Shell. A gentleman from Russell county, Ala., and 4 men whose names and residences are not stated. Bodies recovered: the 2 Misses Guy, of Salem, Ala., W. H. Snell, train hand, a lady and three children from Texas, and two ladies from Columbus—names not known.

[As we are going to press, 11 o'clock at night, we learn that the three who were killed by the Columbus train's running into a culvert, were the Engineer and two firemen of the train.]

### Revolutionary Emigration to Cuba.

NEW ORLEANS, Dec. 30. It is reported on good authority that emigration to Cuba has been going forward quietly and legally for several

months past, with the view, it is supposed, of revolutionizing the island. A secret Agent of the government has been here for some time, but he detects no illegal emigration.

### ARRIVAL OF THE STEAMSHIP

### AMERICA.

### COTTON STILL ADVANCING!

### MARKET CLOSED ACTIVE!

CONSOLS 97!

Halifax, Jan. 2.

The steamship America, has arrived, bringing later news than the Fulton.

Sales for the week, 67,000 bales, at an advance of 1/4.

The market closed active, and advancing.

Consols 97.

### From the Baltimore Sun.

### Thirty-fifth Congress.

### SENATE.

WASHINGTON, Dec. 22.—Messrs. Cameron, of Pennsylvania, & Seward, of New York, presented memorials from nearly every county in Pennsylvania, asking protection to American industry.

Mr. Davis, of Mississippi, reported back the bill to increase the efficiency of the army and marine corps by reorganizing disabled and infirm officers, with a substitute.

Mr. Ward, of Texas, reported a resolution to provide for the payment of volunteers who defended the Texas frontier, and to reimburse that State for advance for the same purpose.

Mr. Mallory, of Florida, reported a resolution authorizing Captains Hudson and Sands to accept testimonials of Great Britain.

Mr. Hunter, of Virginia, offered a resolution calling on the Postmaster General for information as to what changes are necessary to make that department self-sustaining—adopted.

The Senate then went into executive session, and after some time spent therein, the doors were reopened.

Mr. Hale, of New Hampshire, introduced a resolution instructing the naval committee to report what action, if any, should be taken by Congress to manifest the appreciation by the country of the gallant and meritorious services of Captain Charles Stewart—adopted.

Mr. Brown, of Mississippi, introduced a joint resolution authorizing the President to confer the title of Admiral by brevet for eminent services, provided the grade once filled and becoming vacant this resolution expires. Mr. Brown asked its immediate passage as an appropriate recognition of the services of Com. Stewart, who had been harshly treated by the retiring board. Objected to and laid over.

Mr. Hale, of New Hampshire, submitted a resolution renewing the call made at the last session on the Postmaster General for information relative to the maladministration of the postmaster of San Francisco. Laid over—Adjourned.

### HOUSE OF REPRESENTATIVES.

The House met at the usual hour.

The Speaker stated the question to be on the third reading and engrossment of the pension bill as amended, and it was adopted by yeas 139, nays 12. [All the South Carolina members in the negative.]

The following is the pension bill as adopted:

That each of the surviving officers, non-commissioned officers, musicians & privates, who shall have served in the regular army, State troops, volunteers or militia, for a term of sixty days or more, or who have been engaged in actual battle with the enemy, in the war declared by the United States against Great Britain, on the 18th of June, 1812, be authorized to receive a pension from the United States, to commence from the first day of the present Congress, and continue during his natural life.

Sec. 2. And be it further enacted, That each of the officers, non-commissioned officers, musicians & privates, who have served in the regular army, State troops, volunteers or militia, for a term of sixty days or more, against any of the Indian tribes during or preceding the war of 1812 with Great Britain, or who were engaged in any battle fought by the United States against any Indian tribe during the aforesaid war with Great Britain, shall be entitled to all the benefits of this act.

Sec. 3. And be it further enacted, That if any of the officers, non-commissioned officers, musicians or privates have died, or shall hereafter die, leaving a widow, such widow shall be entitled to receive the same pension to which her husband would have been entitled under this act, for and during her natural life.

Sec. 4. And be it further enacted, That the pay allowed by this act shall, under the direction of the Secretary of the Interior, be paid to such officer, non-commissioned officer, musician, private, or his widow, or the authorized attorney, at such times and places as the Secretary of the Interior may direct; and that no officer, non-commissioned officer, musician, private, or his widow, shall receive the same until he is entitled to the same, in accordance with the provisions of this act; and that the pay hereby allowed shall not be, in any way, transferable, or liable to attachment, levy, seizure, by any legal process, whatever, but shall go unimpeded to the possession of the officer, non-commissioned officer, musician, private, or his widow.

Sec. 5. And be it further enacted, That the officers, non-commissioned officers, and privates, who served for the time of sixty days in the naval service, or were engaged in battle with the enemy, during the war with Great Britain, aforesaid, and their widows, shall be entitled to the benefits of this act, in the same manner as is provided for the officers and soldiers of the army of the war of 1812.

Sec. 6. And be it further enacted, That the pension provided by this act shall in no case exceed the full amount of ninety-six dollars per year, and shall be graduated according to the length of service, as follows: For twelve months service, or more, 96 dollars; for six months service, but less than twelve months, 75 dollars; for sixty days service, but less than six months, fifty dollars; provided, That the survivor, or surviving widow of an officer, non-commissioned officer, musician, or private, who participated in actual battle, in

said war, shall be entitled to the maximum pension given by this act.

Mr. Phelps, of Mo., moved that the House go into committee of the whole on the bill making provision for the payment of Indian and other pensions, and he expressed the hope that debate would be confined to the subject matter of the bill. Agreed to.

Mr. Phelps explained the bill, which appropriates \$862,000.

Mr. Sherman, of Ohio, called attention to the fact that the pensions paid revolutionary pensioners were much less than those provided for the soldiers of the war of 1812 by the bill which had been passed this morning.

The bill was then informally laid aside with the view of being reported to the House. The military academy bill was then taken up, which appropriates \$180,884.

### The Printer and His Types.

The following beautiful extract, from the pen of Ryland Taylor, the traveling printer we commend to the craft everywhere:

Every day, their life long, they are accustomed to read the newspaper, find fault with its statements, its arrangements, its looks; to plume themselves upon the discovery of some rough and ready type that gets into a frolic and stands upon its head; or some word with a waste letter or two in it—but of the process by which the newspaper is made, of the myriads of notions and thousands of millions of necessary to its composition, they know little and think less.

They imagine they discover of a wonder, indeed, when they speak of the fair white carpet woven for thought to walk on, of the rays that flitter upon the backs of the beggar yesterday.

But there is something more wonderful still. When we look at the hundred and fifty-two little boxes, somewhat shaded with the touch of ink fingers, that compose the printers' case,—noises, except the clicking of the types, one by one they take their place in the growing line—we think we have found the marvel of the art.

We think how many fancies in fragments there are in the boxes how many atoms of poetry and eloquence the printer can make here and there, if he only has a little craft to work by, how many facts in small handfuls, how much truth and chaos.

Now he picks up the scattered elements until he holds in his hand a stanza of Gray's Eleg or a monody upon Grimes "all bopped up before."

Now he "sets" a "bumpy missing," and in "Harris' Lull," he arranges a bride in "small cars," and a sonnet in "a sonnet," in "monument," he announces that the languishing "word," in one sentence—transposes the word, and deposes the days that are few and "evil" in the next.

A poor jest ticks its way slowly into the printer's head like a clock just running down, and a strain of eloquence marches into line letter by letter. We fancy we can tell the difference by hearing of the ear but perhaps not.

The types that told a wedding yesterday, announce a burial to-morrow—perhaps in the self-same letters.

They are elements to make a world of—these types are—a world with something in it as beautiful as spring, as rich as summer, and as grand as autumn flowers that frost cannot wither, that shall ripen for all time.

The newspaper has become a logbook of the age; it tells at what rate the world is running; we cannot find our "reckoning" without it.

This image shows a vertical strip of a document page. The left side is a dark, heavily textured vertical band, likely representing the binding or the edge of the paper. The right side is a lighter, speckled area, possibly representing the main body of the page or a different material. The overall appearance is grainy and high-contrast, typical of a scanned document edge.[illegible]

Dropped from the face of the F. and the beautiful heiress was permitted to the astonished gentleman.

That they were afterwards married the reader has already imagined. The marriage freed this means of procuring a worthy husband, and the gentleman had long been looking for "an angel in disguise."

The happy husband is often heard say that he got an "heirress for a price."—[Portland (Me.) Transcriber.]

**Went is this Wonderful Place.**

From *Dickens's Household Words*.

We may now very naturally inquire—what, in this wonderful place? Is it fluid, transparent, and palpable body, which penetrates through and everywhere? Is it composed of matter, which is equally sublimaried at all the points, which it occupies? Is it exactly the same in neighborhood of a voluinous phlegm as in the midst of an immense space entirely empty of solid bodies? In a word, does it differ essentially

ry atmosphere? All these points are open to controversy. In the opinion of learned men, whose express belief it is to defend and attention, the difference only in its extreme subtlety is that the atmosphere is a highly condensed medium through which certain rays of the planets—a definition that has been ventured in, the other is the sum of all the elements which compose the whole of which atmospheres are the compound; in other words, atmospheric matter results from the condensation of a certain amount of ethereal matter, and the other is the element out of which all other things are formed.

This notion is not very far removed from that entertained by Mr. Goussier, who believed that the other possessed all the qualities of ordinary gross matter, and particularly the quality of being impenetrable to light, so that its extreme rarefaction, on account of the properties with which it is endowed on a scale of infinitesimalness; on the other hand, at the surface of the earth it attains a degree of density which we are able to measure by experiment. The other, of the extreme subtlety of which we have spoken,

planetary spaces, is thus believed to be an expansion of all or several of atmospheres of the planets, or of if it is most volatile elements, and would furnish the material necessary for their formation. The question of the medium which we designate by names of light, heat, &c. And held to be far from impossible that gradual portions of these atmospheres by terrestrial changes were converted into the etherial medium of communication between distant worlds of the universe. either, then, is an imponderable, or weighable, or, rather, an unweighable fluid, endowed with perfect elasticity and impenetrability; and capable also, and also the intervals between the elementary molecules of solid bodies, even the molecules themselves, as to the of the gases which are assumed to be hollowed and spherical. In short, ether pervades everything and is everywhere; in the most elaborately formed vacuums, and in the most rare substances. But the mind cannot admit the existence of an imponderable all-pervading fluid, if it is a fluid; it is a body. No all bodies are ponderable; therefore

know that the ether has not been weighed, but we have no right to assert that it has no weight. The ether is the essential principle of all bodies; it is the primordial state; it is matter in the condition of extreme tenuity, which prevents its being palpable, separable from the matter of the first and second body, in respect to density, of which we are able to take cognizance; and hydrogen is either condensed, tangible, or ponderable. Dr. Prout propounded the hypothesis that matter is uniform in its nature, and that all atomic weights are multiples of the weight of the first body. It would now appear that the weight of hydrogen is a multiple of that of oxygen, either, or of unknown intermediate bodies, which are themselves multiples of hydrogen. Several gases have been reduced to a liquid, and even a solid form, and the ether, which is the most volatile, extreme, acid, azotic and hydrogen in nature, hitherto resisted the efforts even of Paracelsus to make them liquid. The most gaseous substance which will be liquefied by human agency is doubtless the ether.

Whence comes the matter of which

is generally called cosmic matter—*i.e.*, universal matter; but does this of matter differ from what may be called universal ether? Many natural philosophers believe that atmospheric matter is produced by the condensation of ether. But if ether be a substance capable of condensation so as to form the atmosphere, the atmosphere in turn may be capable of condensation so as to form solid globes, such as the planets, with the animals and plants which live on them. But the existence or non-existence of ether is a question of no importance from its infinite connection with the speculations that have been put forth respecting the nature of light, the medium, which forms throughout space a material communication to the very distant visible bodies, whose periodical vibrations are supposed to constitute the theory of undulation. Whether the medium be, (as seems probable), not a continuation of our own present atmosphere, the fact that there is such a medium deserves great support from the powerful arguments, which are now being advanced, in maintenance of the undulatory theory, it would be difficult

able to solve the problem, what is the absolute density of the luminous eth-  
er at any given point of space? But  
the data hitherto attainable are insuffi-  
cient for its solution. It may be remark-  
ed, however, that, according to the  
hypothesis laid down by Boyle, the luminous  
medium is incomparably denser than  
the atmosphere would be were it extended  
to the interplanetary spaces. The ether  
may also be perhaps regarded as a  
propagating agent of electricity as

therefore, likely to be for years to come at the rate of a billion and a half per week, or seventy-seven million dollars per annum, equal to one-half the value of the cotton crop of the country.

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

**"POETRY."**

"It is the gift of Poetry to hallow every phase of life which it moves; to breathe round Nature an odor more exalted than the perfume of the rose; and to shed over it a tint more magical than the blush of morning."

**The Bereaved Husband.**

BY MRS. E. L. SAXON.

He sat within a silent room—  
Death's shadow had been there,  
His heart was filled with grief & gloom,  
His head was bowed in prayer.  
He strove to shut out memory,  
So filled with bitter pain,  
But close before his weeping eyes  
Her glass was held again.

Again he stood before his wife  
And almost deemed her living—  
Again he took the farewell kiss  
Which she had died in giving.  
He half forgot that death had been  
Within his pleasant home,  
He seemed to feel her presence there,  
Beside him in her room.

There stood upon the mantle shelf  
A vase of faded flowers,  
They had been placed there by herself  
In happy, glowing hours;  
He had but her vacant crimson cheek  
That shaw across it lying;  
It seemed as though she folded round his breast  
When he had seen her dying.

There was her basket and her books,  
Her portrait on the wall,  
The Bible, where her last sweet looks  
On holy words did fall.  
A few short years before and he  
Had brought her there a bride,  
But now she lay cold and at rest  
With her infant by her side.  
It did not dream how much he loved  
The flower that he had cherished,  
Or how she twined about his heart,  
Until the bloom had perished.

**Thou hast Woven the Spell.**

BY GEORGE F. MORRIS.

Thou hast woven the spell that has bound me  
Through all the sad changes of years—  
And the smiles that I wore woe on— I found  
Have faded and melted in tears,  
Like the poor wounded fawn from the mountain  
That seeks out the clear silver rill,  
And lingers in vain at the fountain  
Of hope—with a clank in its side,  
Thou hast taught me that Love's easy fetters  
Are made from the thorns may import,  
That the coining of words and of letters  
Comes not from the mint of the heart,  
Like the lone bird that flutters her pinion,  
And struggles to fly thy dominion,  
But I find that the struggle is vain.

**Miscellaneous.**

**JENNY JENKINS.**

BY S. C. J. JR.

"Oh," said Isadore Bolton, with an impatient stamp of the foot, "I shall not want you to attend upon this coming nor do I wish you to show yourself at all when I have company—"

"As you are becoming too familiar for one of your position, I will keep your name out of all I call for,"

Jenny Jenkins turned to the window to hide the few tears that would trickle up. She had been snored at once for fearing that she used every precaution within her power on the present occasion to keep back the flood.

"You need not pretend that you are my best friend here by what I have said," remarked Isadore, as she saw her maid, "I am serious in your situation and act as easily affected. Never on any of these visits of yours to a pretty girl as my very services have got to be treated as those they were honest guests."

"Stop, Miss Bolton," cried Jenny, rushing away her tears, & facing her mistress, "I have no such desire, you may very well know. I know I am poor & friendless, and that but for your kindness I might be none without a home at I hope you will allow me to my situation, and I thank me."

"Hearkening, indeed," retorted Isadore, with a laughing eye. "You are a smart morsel, aren't you? I suppose you think that John Lapham loves you. I have no doubt that you imagine he has—perjured you to others whom he had intended to win."

"I have thought nothing," returned Jenny, struggling with all her power.

"And you had better continue to think nothing," resumed Isadore—John Lapham did once have the air of making advances of a peculiar kind to me. His own squandered fortune needed repairing, and he hoped to attain mine; but when I discovered that was a spendthrift and a libertine, I was afterwards as his I would have turned from a serpent."

"A spendthrift and libertine?" repeated Jenny, turning deadly pale.

"Yes—did you not know it? I thought it had become notorious. But say—I hope he has not been working upon your poor credulous heart. When you say me, it was but my money; but he asks you, it must be—"

"Stop," groined Jenny. "Oh! do not say anything more."

With a look of malignant satisfaction upon the face of her, Isadore Bolton, as left alone, rose from the room, and Jenny alone, and there she lay and wept for a long time; there she lay until of a sudden came on, and until the sound of music came up from the large parlors, where a brilliant party were assembling. Then in the evening she walked out to the garden to get a breath of fresh air. The moon was up, and a gentle breeze, laden with the sweet fragrance of a thousand varied flowers and blossoms, came sweeping softly over the scene. She sat down upon one of the mossy couches, and ere she had been there twenty minutes she heard her

and announced. She looked up, and  
and Melchi John Lapham.  
"Jenny," he said, "I am serious to-  
I have been searching for you."  
She looked up into his handsome face  
—she gazed upon his manly form, clad  
in simple but costly attire—and her  
heart throbbed painfully.  
"Mr. Lapham," she replied, speaking  
in a shy, timid way, "only should  
you seek me. You more in a circle  
at, or above the station I occupy, and  
your associations are far removed from  
mine. Let our acquaintance cease  
here. It may be better for both of us."  
"At least," returned the young man,  
"taking heed by Jenny's side, we will  
understand each other before we part."  
He waited a few moments, and then  
he resumed:  
"If I should be the last time we  
meet, let us at least part understanding."  
"I sought you this evening for the  
purpose of making everything clear."  
"An orphan, as you well know, and  
I alone in the world. My parents  
left me with some money, and I went  
to business. To worldly matters I  
devoted a companion, some one to love,  
and here I am. I saw Isadore Baitou."  
He was called beautiful and witty—  
he threw herself in my way, and gave  
me the most flattering attention; but  
when I came to read her character I  
learned to trust my happiness with her.  
But never again. I could  
not love her. My companion was a  
precious companion I can have. I  
love you—I saw you in an humble posi-  
tion—but it was the person and not  
the situation I sought. You put me in mind  
of my mother when you moved before  
me, and when you spoke and smiled  
I resembled like the dear sister I had  
lost. I believed that you would be to  
me all that the most ardent soul could  
desire. I knew you were an orphan;  
I knew nothing of your history be-  
hind that, nor—do I know now."  
He spoke hesitatingly, as he closed,  
and seemed to be troubled. Jenny saw  
and she quickly answered—  
"You should have thought of that  
before. I am a child of poverty and  
misfortune, and not suited to the sta-  
tion of my companion."  
"But what is this misfortune?" cried  
Lapham, eagerly. "I care not for your  
past, for in the sight of Heaven man is  
worthy only the soul he bears with him;  
and it is this I believe that enriches."  
"It is of this misfortune—parbleu, me  
I speak. I claim this once? Does it  
have any plain upon you? Does it  
hurt?"  
"Stop," exclaimed the maiden. "Ask  
me no more."  
"Say no so, Jenny. Am I not all  
that you could wish? Could you not love  
me? Why don't you answer? Surely,  
I have loved me."  
As the young man gazed into her  
face, and saw how she shouldered  
the burden of her fate, a new thought  
flashed upon him, a new thought  
flashed upon him.  
"Has any one spoken to you concern-  
ing me?" he asked, in an earnest  
whisper. "Has any one spoken  
to me lately?—Oh trouble. There has  
been an extraordinary talk to you. Perhaps  
I have its counterpart. Has Isadore  
told you?"  
"Yes," answered Jenny, now resolu-  
te, that she would tell all. "She told  
me that you were a spendthrift and a  
wretch."  
"Did she say that?" whispered Lapham,  
startling, though something had  
been said.  
"Yes; and she said she refused your  
company on that account."  
"Oh, God forgive her!" And she has  
been a long story into my ear of you,  
my little life. Will you not trust me with  
it?"  
"If you would know of my man-  
ners, I shall refer you to those who  
know me best; when he asked her to  
go, she said—  
"I would have from your own lips."  
Jenny hesitated at first, but finally  
resolved to tell all. Her com-  
panion took one of her small white hands,  
and held it in both his own while she  
spoke. She told him of her earnest  
desire of dark days and of dark  
thoughts—want of misery, of degra-  
dation, and of sorrow; and she told  
him of the fate of her trials, and of  
her struggles, and through it all—from  
the air of her birth up to the present—  
she had never swerved from the right,  
and held her hand upon her heart she held  
up to her God, and trust in Him  
without fear or shame.  
"Bless you," cried the young man,  
and he finished. "I believe you, and  
I return I only ask that you will be  
true to me when you stand at your  
God. I have no more to say. My character  
as Isadore has spoken against it."  
They walked in the garden till a late  
hour, and when they finally separated  
they were as happy as they could be,  
if no more falsehood could annoy  
them. John Lapham, with a soul-  
ful disclaimer, and a heart above sus-  
picion, the beautiful, gentle  
young man to his bosom, and gave her  
his highest faith because he knew she was  
honest and peaceful. And she, with a  
heart that knew no guile, trusted in his  
kindness, and loved him devotedly.  
Within the large parlors all was life  
and animation. Isadore Baitou was  
among the guests of the day, for she  
believed she had made a new conquest,  
and it was a valuable one. Among  
the new arrivals in the town was that  
George Arlington. He had lately  
come from Texas, where he had spent  
an idle, dissipated, and dissu-  
satisfying life. Of this there was  
question, as his banker was a native  
of the town, and had charge of the  
finances. And then Arlington was only  
thirty and twenty, and was, moreover,  
a decidedly good-looking. In short, he  
was a gentleman of polished and reli-  
gious manners, and no person of abnor-  
mal could find company any length  
time without discovering that he

possessed a kind and true heart. Isadore made sure that she was free from any matrimonial engagement, and then he laid siege to her affections. She talked with him, she laughed with him, she danced with him, she played and sang to him, and when she fancied that she had drawn the music to her, he tossed her head disdainfully when he detected any attention upon other fair ones.

Isadore was handsome, and she had some wit and some intelligence. His mother was a widow, and she and her daughter were the only ones who were left of a young little family dwindled in ten years, after the late father had died away now. The life they had led was not an expensive one, and it had led to something to give the means for parties, which had been many for years wherein a rich husband might be found.

"Well, my child?" said Mrs. Bolton, when the company had all gone, and she was alone, "how do you prosper?"

"Well, well," replied Isadore, "I've him safe enough. I know he is not. He will propose when I give him opportunity."

"Then you had better give him that opportunity at once, child, for we cannot hold out much longer. My purse is well nigh empty. Do not let me hear you do like John Lapham."

"If you love me, mamma, don't mention such a thing to me. I feel that I am well rid of it. He must marry me in fifteen thousand dollars at the most, while Mr. Arlington has ten times more, twenty times that amount. It was a blessing that I got him off in season."

"And will he make an offer to Jenny Kinsley, think you?"

"Why—*he?*? Preposterous! He has to say with her—he may deceive her, but he have placed her on her guard. She will be to blame if she succumbs."

"There was no need of that, Isadore," said Mrs. Bolton, with a smile. "I think she had better be rid of it at girl. She is young—two years younger than you are—and different. Her beauty is of a single far beautiful than yours, and the contrast calling it out is her face that first turned the eyes of Lapham from me."

"True; she has beauty," responded Isadore, with a vengeful air, "but it is a kind that can be very dangerous any one save himself. However, I've held the same opinion which you've expressed. I do not want her with me. We have had her long enough without no marriage—about five, I suppose, as I said."

"It was finally settled between the mother and daughter that poor Jenny the girl who had been so faithful & who had borne with their whims and wishes without murmuring—should be sold off. And it was furthermore decided that George Arlington should be caught and secured as soon as possible."

(To be concluded next week.)

**The Angel in Disguise.**

A DRASTIC AND YET TRUE STORY.

A beautiful young heiress had become so disgusted with a flattering set of soft-pated pomatum-haired, mussed, flippant, strongly perfumed suitors on the fashionable world, turned all her property into money, deposited it in a bank, and went, pedestrian as she was, through the city in which she had hitherto moved with so much magnificence and display. She asked alms of the few who of late had knelt at her feet, and, casting a look of scorn upon the velvet face of course wandering to her legs. She entered the city—here she met with derision and scorn. A few kind-hearted persons, true, bestowed aid; but these were her poorer class, who had had work to procure their own daily bread; but they could not turn a fellow-creature away from their door. She had a small pittance from their scanty charity.

One summer day, a large company of them on a beach. They were mostly poor in the city. The disguised heiress, in some case or had, wandered there. She asked alms of some of the "upper ten." They spoke contemptibly but gave nothing. When she had been heard of, she was called to the company. Most of them laughed or looked as if they thought it "served her right." The younger woman turned about and was looking sadly away, when a good looking gentleman stepped forward, and, holding out of her arm, thus spoke:

"Stay, my good woman—tell me at what you want."

She replied in a only trembling tone, "I desire only a simple trousseau."

"You shall have it," said the gentleman, "he added drawing from his pocket a bag, and placing it in the glove of the old woman, "take this and if it is not enough, I will give you another."

The heiress returned the eagle eye examining, "I want a sapphire—only a sapphire."

"I perceive that she could not be made to believe that the gentleman drew out a sapphire, and gave it to her, thinking the generous donor, walked a very way. After being laughed at so doing by his comrades, he set out in pursuit of the beggar-woman, and, finding that she was on her way, he called in disguise, "I wish to ascertain."

"Not that he thought this. He detected to show his indifference to the comrades said, the strange female who had asked. He then overtook her and said, "I wish to ascertain if you are, for pursuing you. I would have more than you."

As the speaker ceased, the mask

dropped from the nose of the Talmud, and the beautiful Hebrews were transported to the astonished gentleman. "That they were afterwards married," the reader has already imagined, for a heiress used this means of procuring a worthy husband, and the gentleman had long been looking for "an angel in disguise."

The happy husband is often heard to say that he got "his treasure for a sixpence."—[Portland (N.H.) Transcript.]

**What is this Wonderful Ether?**  
 From Dickens's Household Words.

We may now, very naturally inquire what, in short, is this wonderful ether. Is it a fluid, transparent, and impenetrable body, much ponderous as air, and everywhere?—It is a ponderous matter which is equally subtle and impenetrable at all the points, which it occupies. Is it exactly the same in the neighborhood of a voluminous planet in the midst of an immense open space as it is in the neighbourhood of an entirely empty of solid bodies?—It is the same, and it is everywhere, the most rarified portion of the planetary atmosphere? All these points are forced into controversy. In the opinion of some men, whose express belief merits deference and attention, the ether pervades only in its extreme subtlety from much more highly condensed atmospheres, constitutes the condensed matter of the planets, and is defined as "ether" in returned is, the ether is the constituent of which atmospheres are composed; in other words, atmospheric pressure results from the condensation of a certain amount of elementary matter, and, naturally, ether is the elementary matter of which all the other things are formed.

This notion is not very far removed from that entertained by Mr. Grove, who believed that the ether possessed the qualities of ordinary gross matter, and particularly the quality of weight. If this matter, on account of extreme rarification, can only manifest the properties with which it is endowed, on a scale of infinite minuteness, and on the other hand, the weight of the earth it attains a degree of density which we are able to measure by experiment. The ether, or the extremely rarified matter which fills the interplanetary spaces, is thus believed to be expansion of all or several of the atmospheres of the planets, or of their constituent matter, and it would be curious, which the material necessary for the transmission of these modifications of motion which we designate by the names of light, heat, &c. And it is to be too far impossible that the rarified portions of these atmospheres, which we call ether, could be so different to another, thus forming a natural material communication between the various worlds of the universe. The ether, then, is an imponderable, or, unchangeable, or, rather, an unweighed matter, endowed with perfect elasticity—unlike the other matter, which we call matter, also the intervals between the elementary molecules of solid bodies, and the molecules themselves, as those are the gases which are assumed to be unweighed and spherical. In short, the ether pervades everything and is everywhere; in the most elaborately formed of the material bodies, and in the most uncombined. But the mind cannot admit the existence of an imponderable fluid, which, if it is a fluid, is a body. Now, the bodies are ponderable; therefore, the ether is ponderable. We certainly know that the ether has not been weighed, but we have no right to assert that it is not weighed, and that it is not weighed in accordance with the principle of all bodies; it is their ponderal state; it is matter in a condition of extreme tenuity, which is not its being palpable, seizable, or measurable. Hydrogen is the first matter, in respect to density, which is not capable to take cognizance; hydrogen is the most elastic of all gases, or perhaps the most elastic of all matter.

Dr. Porter propounded the hypothesis that matter is uniform in its nature, and that all atomic weights are proportional to the weight of hydrogen. It would now appear that the weight of the ether is a multiple of that of the hydrogen, or of unknown intermediate bodies, which he has not yet ascertained.

As the several gases have been reduced to a liquid, and even a solid form, by application of great compression & great heat, and as water and hydrogen have been restored to the efforts even of a vacuum to make them liquid. The gaseous substance which will be condensed by human agency is doubtless of the same nature.

It is hence comes the matter of which the heavenly bodies are composed?—It is the same matter which we call ether, or the universal matter; but does this universal matter differ from what may be called universal ether? Many natural philosophers believe that atmospheric pressure is produced by the condensation of the ether. But if the ether capable of condensation so as to form an atmosphere, the atmosphere in turn is capable of condensation so as to form solid globes, such as the planets of the animals and plants which live upon them. But the existence or non-existence of the ether derives its great importance from its influence upon the question respecting the nature of light, the all-pervading presence of a medium, which forms throughout space, a universal visible medium, which serves as the fundamental hypothesis of the theory of undulation. Whether this medium be ether, or whether it be a condensation of our own proper matter, the fact that there is such a medium derives great support from the powerful arguments which are now being put forward in maintenance of the undulatory theory. It would be desirable to give the problem, what is the nature of the medium, and what is the origin of the power of space? But the advocates of undulation are insufficient to solve it. It may be remarked, however, that, according to the law of gravitation, the ether is not so ponderous as it is incompactly denser than our atmosphere would be were it extended to the insupportable weight of the ether, which is perhaps regarded as the generating agent of electricity and

magnetism as well as of light. At the  
 annual meeting of the Young Men's  
 Association of Young Men's Fraternity,  
 and Anglo-American Association, at  
 held several optical phenomena which  
 are inexplicable on the supposition  
 that light was the effect of luminous  
 particles shot out from the sun with  
 immense velocity, while they were  
 explained by the explanation that the  
 ethereal space is filled with an evenly  
 vibrated elastic gas.  
 On this latter case the sun, and the  
 dust in all directions molecules of  
 dust and heat which are to travel with  
 inconceivable swiftness, may now be  
 regarded as a monstrous plume ever-  
 ing devoured by fire. The space  
 between the sun and the planets, the  
 hypothesis, is simply an impression  
 matter which fills all space a pure  
 vibratory movement which extends  
 the form of luminous waves as far  
 as the most distant planets and further  
 supplying them with heat and  
 light. These luminous waves, or rather  
 the reason why the system is called  
 undulatory theory.  
 The views respecting the nature of  
 ether, of which we now conclude  
 sketch, are what are entertained to  
 a greater or less extent, by almost  
 all scientific pioneers of modern age.  
 Understanding which, it is not sur-  
 prisingly proved that the ether is  
 a real or actual existence. The  
 grand quarrel of Epicurus and  
 Aristotle, to which mounts to a  
 antiquity and had already acquired  
 importance in the time of Aristotle,  
 scarcely be said to be a question of  
 a question. There is still a  
 circumstantial evidence in  
 the allegation. It is considered  
 so interesting a subject that it is  
 of the five classes of the modern  
 is, at their annual meeting, in  
 eighteen hundred and fifty  
 of their grand triennial meeting  
 the same works have for their  
 the demonstration of the  
 hypothesis of a vacuum in  
 the presence of the presence of the ether  
 throughout heavenly space.  
 The undulatory theory, which  
 the movement of the velocity of the ether  
 is light.

**Sinora and Chinglung.**  
 The Washington Union gives  
 a picture of the resources of  
 the country, over which and  
 the president recommends that the  
 country should be a temporary  
 capital for outrages upon a  
 citizens, and upon principles of  
 preservation of humanity to  
 the frontier States. The  
 on an average of  
 the population of 120,000, including  
 the Indians. The Union says it is  
 beyond doubt, the richest mineral  
 known world, blessed with  
 granite, and in the valley of the  
 Sugar, cotton, wheat, and  
 the fruits grow in  
 unknown even in our  
 possessions. Notwithstanding  
 advantages and the  
 orderly habits of the people. The  
 is rendered miserable by the  
 of the Apache Indians. Their  
 situation, except in the  
 neighborhood of the  
 and the whole silver mining  
 abandoned. These savages have  
 in the United States north of  
 Gila river, to which they  
 their booty, or, when they  
 a great outrage upon  
 they seek shelter in Mexico.

There is no view of which area can  
 guilty, no meanness, no shuffling  
 kindness, which excites so much  
 against him his contemporaries  
 and neighbors, as his success  
 is the one unparelleled crime  
 which reason cannot defend nor  
 mitigate.  
 Heaven with such parts has clothed  
 "I not reason to detect him"  
 genuine and natural expression of  
 vulgar human mind. The  
 writes as we cannot write who  
 can neither paint, nor  
 cannot labor, and cannot  
 of three, has accumulated in  
 person all the offences of which  
 can be guilty. Down with him  
 cummereth he the ground.  
 London Times.

Senator Douglas has recently written  
 private letter, in which he declares  
 not a candidate for the Presidency.  
 He states that the fight has  
 as been one of principle, and  
 conscience and conviction, that  
 has triumphantly vindicated  
 in the eyes of his own people  
 to represent whom in the  
 councils of sovereignty. He  
 expressed no higher ambition. He  
 states his adherence to the  
 faith and organization, and  
 purpose to support the  
 line. He will take an early  
 in the Senate to define his  
 he says have been the subject  
 of unjust misconception.  
 Washington States.

**COMPARATIVE WEALTH OF CITIES.**  
 The comparative of two great centres,  
 Boston and New York, amounts to eight  
 of about millions of dollars  
 \$325,000,000, and Boston  
 \$83,250,000, or a little more than one half  
 of New York. The property of  
 Boston is \$100,000,000 more than  
 of the city of Philadelphia, and  
 by three times that of Baltimore.  
 It is said that Boston has more property  
 per capita than any other city in the  
 United States.  
 New York Herald sums up a  
 review of the gold fields of the United  
 States, with the following estimates of  
 the value of gold crops: California  
 a week million a week million.  
 All the gold crops of the United States  
 we can safely say with  
 already have, will give us at least  
 as much. Our gold crop, therefore,  
 likely to be for years to come  
 of a million and a half per  
 or seventy-seven million of  
 equal to one-half the  
 of the cotton crop of the country.

The Late Disaster.

We copy from the Columbus Sun

a full account of the late terrible

disaster on the Muscogee Railroad:

Not being able to obtain any

like satisfactory or definite

information as to the extent of the

disaster on the Muscogee Rail-

road, sixteen miles from this city,

on Friday morning, we went to the

scene of the wreck on Saturday.

The height of the banks of the creek

is about 25 feet, the crossing to which

is secured by a culvert of stone, masonry,

which has been standing some three

years. The only person saved who was

in a position to know how the accident

happened, was the negro wood-passer.

He says nothing appeared to be wrong

and the train was moving slowly over

the culvert, and that when the engine

approached the further bank, he felt

the works sinking and the engine head-

ing up, about which time he was knock-

ed or thrown off on the upper side, and

somehow or other escaped contact with

the falling train or works, and swam a-

shore. The train consisted of the en-

gine and tender, a box car in which

was Pryor's celebrated race horse Mo-

ndore, William Wehr, Stegney, (a ne-

gro trainer belonging to George Lamar,

of Augusta,) and Jordan, race rider,

belonging to Major Kestley, of Cass Co.,

in charge of the horse; next the bag-

gage car, and last the passenger car.

From the wreck of the engine, we think

the engine and tender only, were on

the culvert when it fell, and that as the

other cars successively approached the

precipice they fell on top of the engine

and trucks of the tender; and that the

passenger car, going over last and fall-

ing on the mass, broke the concussion

which such a fall would otherwise oc-

casional, and accounts for there in it

not getting seriously hurt. The pas-

senger car, in its descent, broke off the

top and split its contents in the water;

and from the circumstance of its going

down the creek a great distance, we

think it must have passed over the

others to the stream below.

The box car, in which was the horse

and his attendants, went entirely to

pieces and falling when and as it did,

the wonder is how the three persons in

it escaped being crushed to death. The

box was scarcely hurt, the negro man

and a large splinter run into his hip,

his head slightly injured, and the

white man was but slightly hurt. In

the baggage and mail car was four ne-

gro passengers, conductor Snell, and

W. H. Snell, train hand. This car

broke to two and one portion now rests

on the engine and truck of the tender,

about thirty feet below the range of the

road, and the other portion sets on the

bank where stood the abutment of a

bridge, which was completely wrecked.

W. H. Snell was killed, it is supposed, by

an injury in the chest; conductor Snell

received a severe wound on the nose,

and was otherwise bruised. He could

not swim, but was floated down the

stream some four or five hundred yards,

he don't know how, with a heavy over-

coat on, and finally, caught by the hub

of a wheel, where he remained suspended

in the water several hours before he

was found and rescued.

To go and view the scene of the

wreck, all wonder how many escaped a

violent death, and to view the

greater mystery than to those who

were the actors.

At the time of the said occurrence

there was a heavy rain falling, and it

was so dark that no object was visible.

Number of persons on the train 30

of which 25 were saved.

Great credit is due to the persons in

the immediate neighborhood of the

We find the following in The States

of the 1st instant:

Vine la Republicque—Long live our

government, our liberties, and our laws

here we can shake hands with our

lawyers, which is more than one could

do with Bonapartes, Kings, or Queens

who care for them. Soldiers, sailors

and civilians, errand and errand, the

force Democratic, in all its glory, all

other orders besides, visited the

President to-day in array motley and

multitudinous.

Surging onward like an ocean wave,

they poured up the steps of the White

House, marching between files of offi-

cers, to the music of the marine band.

We, too, were in that crowd. We

passed through the ante-room, passed

into another, where we found Goldard,

in all the glory of his uniform of Chief.

We saw a fine coal fire burning, we

saw some splendid furniture, we saw a

picture of Washington, and to his mem-

ory we bowed our heads: still we were

borne onward, until we entered another

room, and here we found Old Buck

himself, "dressed to kill."

We put our chin, fingers in his

large white hand. It felt fat and com-

fortable as Presidents should be, for

to be a President is a fat and comfort-

able thing indeed, and we said, "How

do you do, Mr. Buchanan?" and he said

something which sounded like "Very

well, I thank you;" and then we passed

on, but on our way out we noticed a

heavy bright beam of light shining on

our backs, as if from the balcony

of the President's room, as if they

had designs on his Presidential chair,

and then we entered another room, and

here, wandering about, was a crowd of

all sorts scanning the quarters which

the people have assigned their ruler, and

then we passed out, but we were stop-

ped by a full rigged cannon on the

mainly coast, but an officer made way

for us, and here we are again.

But we were not to be disappointed, not

a single drop. What a dry crowd, not

to be a bachelor, to be sure. No matter.

We will find it elsewhere, and we will

drink as a toast, "The Union now and

forever."

CONFESSIO OF TABLE MO-

VER.

George P. Pain, the Spiritualist-Medium,

admits that he is a "Dumbey"—The

"Razor Strap Man" a Circle—How

the Phenomena were Produced.

For a long time Mr. George P. Pain,

of Worcester, Mass., has been known

a powerful "physical medium," and his

achievements in the line of table-moving

have converted hundreds of people to

spiritualism, and even an ardent

theist of his beliefs. His demon-

strations were in the dark, like those

of the Davenport boys, but under a

full blaze of gas, or in broad daylight,

he has made tables move apparently

without human contact, to the comfort

of believers, and the confounding of

skeptics.

The Worcester Spy, of the 20th of

October, contained an account of one

of his exhibitions, in which the table

was moved, and table doods re-

sponded on it in good style, in time with

the whistling of a gentleman present.

From time to time "reliable medi-

ums" saw spirits hovering around Mr.

Pain, and he was in a fair way of be-

coming a lion among the Spiritualists.

Recently Mr. Pain came to this city,

mainly for the purpose of convincing

Mr. Coles, a former medium, who has

recently concluded that physical mani-

festations are a humbug. For this pur-

pose a circle was held in Mr. Pain's

rooms, and Coles, with several others,

attended, and were unable to detect any

deception. At a second interview,

WASHINGTON, Dec. 24.—Parties

intimately connected with Mexico,

and having a widely extended knowledge

of Mexican affairs, are urging upon our

government the sending of several

vessels of war to Tampico, with pos-

itive orders to compel Garza to restore

what he has plundered from American

citizens, in the same way that he was

compelled to make restitution to the

Spanish merchants.

Five American vessels have been

fired into, and looted and robbed by him,

and the cargo of one was ordered to be

discharged on the beach, while he was

besieging the city, and was then sent

by him into the harbor on his own ac-

count. The vessel was then made a

cover to his launches in an attack on

a fort, was perforated with shot holes,

and the chief mate's hand shot away. Her

commander, Capt. Trow, was imprisoned

for eleven days, and was only re-

leased on the arrival of the United

States steamer Fulton

Mr. F. H. GOODWIN, is our authorized Agent, to receive and receipt for subscriptions to the Republican, contract and receipt for advertising, &c. Our friends and patrons will confer a favor upon us, which will be gratefully appreciated, by affording him every facility in their power, in the transaction of business.

**Cuba.**—The Louisville Courier, in an article on the acquisition of Cuba, says that it is more than the key of the Gulf, that it is the janitor of that isthmus, which will soon be the portal of a commerce, outstripping the present commerce of the world. That the entire exports of cotton and other products of the south and west through that channel are not less than \$300,000,000 annually; and that, all that commerce, in case of war is at the mercy of Spanish cruisers—that it is due to our honor and safety that Cuba be obtained—pennably if we can, forcibly if we must. "If Congress does its duty and negotiations fail, war! Let it come. We promise for Kentucky, in such a case, her volunteers will equal their ancestral renown, and achieve a glory which will make her famous throughout Christendom, and her name a word of warning in the halls of the Escurial."

The Selma Reporter makes honorable mention of a Mr. Moore, who has been a constant and regular subscriber, since the issue of the first paper in this city, some 25 years; he had also taken the tri-weekly and daily Reporter. We believe we could venture to vote for that man for Governor, if he were a candidate, without further enquiry. His having been a paying subscriber to, and reader of a newspaper 25 years, would be a sufficient proof of his integrity, constancy and intelligence.

We believe we have some on our list, who have been there more than 20 years, paying up regularly, or at least every few years. But there are here, as we presume there are everywhere else, some men, who when seized with a fit of economy, begin retrenchment where they ought to end—that is, by stopping their newspaper. These are the wisest who have found out at last, that they can make a fortune rapidly, by gazing in the dark at two dollars a year!!!

**HONOR TO WHOM HONOR IS DUE.**—We have been informed from a reliable source, that MAJ. WALKER REYNOLDS of Talladega County, one of the Directors of the Ala. & Tenn. R. R. Road, and one of the first and most energetic and persevering friends of that great enterprise, recently repaired the road, above to the head of the track, with his own hands. During the recent spell of extremely wet weather and bad roads, when part of the road from Talladega to Alpine had become almost impassable, and if left alone would have forced the cotton in some other direction, Maj. Reynolds took a number of hands out of his own farm and kept them employed near a month in making repairs on the worst portions of the road. Such an act should inspire every citizen of Talladega County, and fiscal of this enterprise elsewhere, with increased energy and public spirit, and is far more worthy of praise and commendation than that of the man who leaves his thousands to rear marble walls of high-sounding institutions. The one is an act of real beneficence to the living, struggling age; while the other is often little else than a costly monument of the vanity of the wish, merely to perpetuate the memory of a name.

If we had a sufficient number of such Citizens as Walker Reynolds, how long would it take us to cover our beloved and noble State, with a complete network of Railroads?

Our acknowledgments are due, and most cordially tendered to the enterprising and accommodating publishers of the Daily Advertiser and Confederation at Montgomery, and Daily Reporter, Selma. To these neat and interesting sheets we are indebted for much of the latest and most important intelligence we publish.

We heartily recommend the daily and weekly papers published at these points to the patronage of our up country friends—they will find them much more valuable and interesting than northern papers.

Jacksonville on the most Direct Route from New Orleans to New York.

It will be seen by reference to the proceedings of a meeting recently held in Talladega, that \$82,000 have been provided to extend the Selma road to that place, and that active measures have been taken to procure the remaining \$18,000 required.

It is now confidently believed that the road will be finished to Talladega by the 1st day of April next, and also the connection direct from Chattanooga to the East Tennessee Road. After that time, by a careful calculation and comparison, this will have the advantage over all other routes, from New Orleans to New York, of 12 hours in time and \$3 in fare. The excellent daily stage lines of Mr. Powell from Talladega to this place, and of Messrs. Divine and Kennedy from here to Chattanooga, renders this route now, to travelers, almost equal to a continuous

railroad line. But the railroad lines above and below will be pressed on to completion, continually shortening the gap and rendering the advantages of this route, in time and economy, still more important and manifest.

**Ladies Home Magazine.**—The February number of this beautiful, chaste, elegantly embellished and justly popular Magazine, Edited by T. S. Arthur and Virginia P. Townsend, has already come to hand. It is published at \$2 per annum in advance, but we now propose to our friends, if they desire, to furnish both the Ladies Magazine and Republican for \$3 50 per annum in advance.

**ACCIDENTS FROM FIRE.**—We notice this winter, thus far, an unusual number of cases reported of accidental death from burning of clothes; and doubtless many have occurred, not reported in the papers. The mode of dress may have something to do with this, as the winter has been unusually mild. Until the fashion changes, more woollen clothing and increased caution should be resorted to.

**New Cotton Cultivator.**—Mr. A. Smith, has patented a Cotton Cultivator, the utility of which has been very highly spoken of by those who are acquainted with such things. Mr. S. advertises patent rights for Counties and States for sale in this paper, and we learn from him that he intends to have a number manufactured in this place for use by individuals.

For further particulars of the nature and uses of the invention, and certificate of its utility, see advertisement in another column.

**Jacksonville Female Academy.**—The attention of the friends and patrons of this institution is invited to the advertisement of the commencement of the Spring session of that institution on Monday the 14th of February next, and particularly to the importance of attendance on the first day of the session.

**"THE FAMILY JOURNAL."**—This is the name of a new literary weekly paper, recently started in the city of Baltimore, Md. The size, style of print, engravings, &c. are very similar to those of the New York Ledger; but the character of its literary articles, we believe to be far more elevated & instructive. As a southern literary Journal, it has strong and well-founded claims on Southern patronage, which we hope it will receive. It is published at \$2 per annum, payable in advance. Address, Williams & Moore, No. 6, N. Gay St. Baltimore, Md.

**Ladies American Magazine.**—We have received the first number of this truly magnificent work, devoted to Literature, Fashion, Amusement, and Instruction. It contains several beautiful Colored Steel Engravings, and Colored Steel Fashions, besides other engravings and handsome patterns for Crochet and Needlework. The contents of this number are very interesting, and among its contributors, are some of the most popular story writers of the day. Price, one copy one year \$2. Two copies one year, \$3. Address, Henry White, 7 Beckman St. New York.

We thank our correspondent for the following rules; so sensible, timely and true; and hope they will be generally adopted by teachers, who are not already governed by them, or otherwise equally as good. We hope to receive frequent contributions from his pen.

**RULES FOR TEACHERS.**  
1st. Learn to govern yourself.  
2nd. Strive to be an example of punctuality.  
3rd. Have but few rules and enforce these rigidly.  
4th. Study the disposition of every pupil.  
5th. Avoid the least appearance of partiality.  
6th. Show your pupils that you feel a deep interest in their welfare.  
7th. Aid fairness to kindness; rule by love rather than by fear.  
8th. Fulfill every promise, but make no threats.  
9th. Rebuke kindly, praise cautiously.  
10. Manifest a confidence in your pupils and encourage them to retain it.  
11th. Curb and restrain the self-conceit, but encourage the different talents of the pupils.  
12. Remember that you are training immortal minds and must account to God for the example you set, and the instruction you give.  
13. While you teach others, seek earnestly to be taught of God.  
14. Make the Bible your text book.

AN EX OFFICIO TEACHER.

For the Jacksonville Republican.

"Breathes there a man with soul so dead, Who never to himself hath said, 'This is my own, my native land.' Such was the impassioned utterance of Scotland's most illustrious bard. If he subjected to a tyrant's rule, could he be animated by burning patriotism, how much more to every American heart, should be his home, his country, and his native land. We are a people blessed with the privilege of choosing those who rule over us—a people over whom the Godless of Liberty has spread his spreading wings—a people permitted to worship under our own vine and fig tree, where none dare molest or make us afraid; in fine, a people who, if we have not become what Rome once was, the mistress of the world, at least occupy a front rank among the nations of the earth, and lead the van in agriculture, commerce, manufactures, internal improvements, and every thing that tends to the prosperity, peace, harmony, happiness of the world. Nor is it vain boasting to speak of the liberties and blessings we enjoy. Go to the faithful pages of history, and learn from the origin, progress and triumphs of the American Republic, the reasons which inspire our heart with the sentiment of the poet, and prepare our tongues to give utterance

to the soul-stirring thought: this is my own, my native land. It is impossible to allude to the origin of our country, without recurring with pleasurable emotions to the far-seeing penetration, indomitable will and persevering energy of a man whose name history says history, as was the discovery which he made. We are told that he possessed all those energetic impulses of the will, which lead to high achievement; and that there he combined judgment, the most grave and solid—prudence and patience the most steady and unflinching—piety the most devout—and what ensured his success, the most untiring perseverance manifested by man. And perhaps it would not be exaggerating to say, that that being never existed whose heart was filled with more intrepid boldness than that of Columbus. How strong the resolution must have been, to have enabled him to venture into the unknown deep, to brave the perils of an unknown deep, to tear himself from home, kindred and friends, that he might demonstrate to the world, the truth of that philosophy which declares that the earth was round, and that undiscovered land lay beyond the limits of the pathless deep. In my imagination I see him as he leaves the shores of Europe, and with the lead of a compass, and the chart of the globe, he braves the perils of an unknown deep, to tear himself from home, kindred and friends, that he might demonstrate to the world, the truth of that philosophy which declares that the earth was round, and that undiscovered land lay beyond the limits of the pathless deep. In my imagination I see him as he leaves the shores of Europe, and with the lead of a compass, and the chart of the globe, he braves the perils of an unknown deep, to tear himself from home, kindred and friends, that he might demonstrate to the world, the truth of that philosophy which declares that the earth was round, and that undiscovered land lay beyond the limits of the pathless deep.
